No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                  4781.8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor (TIP) which are upregulated by the cytokine interleukin-9 (IL-9) and induce STATT transcription factor activation. The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. The molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for Human TIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid molecules encoding T cell inducible factors, useful as markers for expression or effect of interleukin (IL)-9 in a subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dumoutier

II-TIF or II-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is human TIF genomic DNA located on chromosome 12.
                                                                                                                                                                                                                                                                                                                 Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors
                                                                                     Sequence

The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids inducing STAT

New nucleic acid molecule encoding for treating asthma, an allergy or a T cell derived inducible factor lymphoma

Claim 1; Page 39-40; 46pp; English

This DNA encodes a human T cell derived inducible factor (TIF). The gene cc was mapped to chromosome 12q15. The human TIF was identified based on the compounds of the first was identified by subtraction cloning from a murine TIF, which was identified by subtraction cloning cc interleukin 9 (II-9). BW5147, can be grown in vitro, without the need to compound to cytokines to its culture medium. Many II-9 activities are certified by activation of STAT transcription factors. The novel TIFs were expressed in the presence of II-9, but not in its absence. TIFs induce CC STAT activation in cells. They can be used, e.g. in the stimulation of cregeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).

Sequence 4796 BP; 1339 Þ 912 C; 1063 G; 1482 T; 0 other

The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test II-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecular promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for mouse TIFalpha.
                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 11-14; 26pp; English

IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF alpha genomic DNA.

cell derived inducible factors in cells useful for

1; Column 19-26; 24pp; English

The present invention relates to an isolated nucleic acid molecule, whice encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T cell Derived Inducible Factors (IIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is which

Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TITS and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This DNA encodes T cell derived inducible factor (TIF) alpha identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecule encoding a T cell for treating asthma, an allergy or lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2000-422495/36

This DNA encodes T cell derived inducible factor (TIF) beta identified CC by subtraction cloning from a murine lymphoma cell line BW5147 in the CC presence or absence of interlaukin 9 (II-9). As compared to the coding CC region for TIF-alpha (see AAA28816), that of TIF-beta has six silent CC changes. There are two changes which result in an inconsequential amino CC acid change (at both of positions 36 and 103, Val in TIF-alpha becomes CC IIe in TIF-beta). There is also a more significant change at position CC 112, where Gln becomes Arg, Many II-9 activities are mediated by CC activation of STAT transcription factors. The novel TIFs were expressed CC in the presence of II-9, but not in its absence. TIFs induce STAT CC activation of targeted tissues. Their inhibitors or antagonists can be CC used to retard, prevent or inhibit differentiation of other tissues. The CC used to retard, prevent or inhibit differentiation of other tissues. The CC IIFs and their coding sequences are useful in the treatment of asthma, CC allergies and lymphoma (Claimed). They are also useful for identifying CC compounds that inhibit or activate T cell induced factor activity in a CC cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon

                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid molecules encoding T cell inducible useful as markers for expression or effect of interleukin (IL) subject and diagnosing susceptibility to asthma or allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mus musculus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (II-21). TIF polynucleotides are upregulated by the cytokine, II-9. II-TIF or II-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF beta genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Stimulating

The nucleic acid molecules are shown to be up regulated by the cycokine interleukin-9 (TL-9) and are described as T Cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is mouse TIF beta genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Column 37-44; 24pp; English.

This cDNA encodes a human T cell derived inducible factor (TIF). The quas mapped to chromosome 12q15. The human TIF was identified based on homology to a murine TIF, which was identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of
                                                                                                                                                                                                                                                                                                                             CDS

BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a compounds that inhibit or activate T cell induced factor activity in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (IL-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to trest IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differantiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence encodes human TIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid molecules encoding T cell inducible factors, useful as markers for expression or effect of interleukin (II)-9 in a subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            26-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (IL-21). TIF polynucleotides are upregulated by the cytokine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is human TIF cDNA. The TIF gene is located on chromosome 12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 690 BP; 182 A; 176 C; 167 G; 165 T; 0 other;

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being pu and is derived by analysis of the total score distribution.
